

WEBSITE & DIGITAL SOLUTIONS DEVELOPER

Website Developer | PHP | JavaScript | HTML/CSS | SQL | Secure Web Applications

KRISHNA

Prescott / Flagstaff, AZ Area | +1 (928) 863-6974 | krishnasai1128@gmail.com

PROFESSIONAL SUMMARY

Website & Digital Solutions Developer with 5+ years of experience building responsive websites, landing pages, web applications, internal portals, dashboards, and SQL-backed business systems. Skilled in PHP, JavaScript, HTML, CSS, API integrations, database optimization, secure hosting, access controls, deployment automation, and front-end/back-end troubleshooting. Hands-on experience supporting WordPress websites using the Avada theme/builder for page updates, layout changes, and business content management. Combines strong technical execution with a business-focused approach to website updates, digital content, social media support, reporting, documentation, and clear communication with non-technical stakeholders. Experienced in supporting reliable, user-friendly web solutions that help businesses maintain a professional online presence and improve day-to-day operations.

TECHNICAL SKILLS

Web Development: HTML, CSS, JavaScript, PHP, AJAX, jQuery, CGI Scripting, XML, XHTML, SHTML

Databases: MySQL, Microsoft SQL Server, Oracle, DB2, SQL queries, stored procedures, query optimization

Web Systems: Responsive websites, landing-page support, web portals, e-commerce support, dashboards, reporting

Integrations: REST APIs, XML/JSON data handling, third-party API connections, secure data exchange

Security and Hosting: SSL/TLS, SSH, firewalls, authentication, encryption, TCP/IP, Apache, Windows Server, UNIX/Linux

Tools and Automation: Git, GitHub, Bitbucket, Jenkins, GitLab CI/CD, JIRA, Agile support, PERL, VB Scripting, Bash

PROFESSIONAL EXPERIENCE

Softtune Inc - Web Developer | Remote, AZ |

Jan 2026 - Present

- Develop and maintain PHP, JavaScript, AJAX, jQuery, HTML, and CSS features for business web applications, responsive user flows, forms, and internal workflow screens.
- Support SQL-backed functionality for reporting, account access, operational data updates, internal records, and application-driven business processes.
- Improve website SEO by updating page titles, meta descriptions, headings, image alt text, and clean page content. Add basic website tracking for forms, buttons, page visits, and campaign activity using tools like Google Analytics or Google Tag Manager.
- Configure secure web access using SSL/TLS, SSH, firewall rules, authentication controls, and secure API communication practices. Maintain Windows Server and UNIX/Linux application environments while troubleshooting web, server, database, network, and access-related issues.
- Implement responsive, cross-browser compatible web layouts using semantic HTML, CSS media queries, and JavaScript to ensure consistent user experience across desktop, tablet, and mobile devices.
- Built and maintained WordPress websites using the Avada theme/builder, including responsive page layouts, landing pages, service pages, and business content updates.
- Support website performance optimization by improving page load behavior, organizing front-end assets, reducing unnecessary script usage, and following clean coding practices for maintainable web pages.
- Use Git and GitLab CI/CD practices for controlled deployments, code versioning, release notes, rollback awareness, and production support. Document recurring fixes, deployment steps, and technical decisions so application updates remain easy to support and maintain.

Small Business Web and Social Media Support - Freelancing | Arizona | Current

- Support small-business online presence through website content updates, landing-page changes, social media posting, and promotion-ready digital content.
- Coordinate copy, images, page updates, posting schedules, and business messaging so web and social content stays consistent across customer-facing channels.
- Assist with campaign support, content organization, basic reporting needs, account access, publishing issues, and practical digital updates for local business owners.
- Communicate website and social media updates in clear language for non-technical stakeholders while keeping work organized and business-focused.
- Help business owners organize online updates around seasonal promotions, service changes, customer questions, and basic brand consistency.

Complete Solutions Group - Web and Digital Support Developer | Prescott, AZ |

Jun 2025 - Dec 2025

- Supported business website updates, responsive page maintenance, digital content changes, and customer-facing web improvements for local operational needs.
- Assisted with landing-page edits, form updates, content sections, images, calls to action, and front-end troubleshooting using HTML, CSS, JavaScript, and PHP concepts.
- Helped maintain organized digital content, posting support, social media coordination, and promotion-ready updates aligned with business communication needs.
- Troubleshot hosting, account access, publishing, website display, and data-entry issues while coordinating fixes with business users and technical contacts.
- Updated WordPress website content, images, page structure, metadata, and internal links to improve usability, SEO readiness, and customer-facing presentation.
- Troubleshot WordPress and Avada layout issues across desktop, tablet, and mobile devices using HTML, CSS, JavaScript, and browser developer tools.
- Support digital marketing efforts by updating website content, campaign landing pages, calls to action, and social media materials to keep online messaging consistent, timely, and aligned with business goals.
- Applied practical web quality checks around mobile responsiveness, usability, broken links, secure access, content accuracy, and reliable customer-facing updates.
- Prepared clear update notes for requested changes, completed fixes, and next-step items so business stakeholders could track website and digital work.

First Object Inc - Full-Stack Web Developer |

Feb 2024 - May 2025

- Built enterprise web portal and e-commerce support functionality using PHP, JavaScript, AJAX, jQuery, HTML, and CSS.
- Designed and optimized MySQL and Oracle database queries, stored logic, and data access patterns, improving key query performances.
- Automated backend routines with CGI Scripting, PERL, and VB Scripting to improve consistency across scheduled tasks, logs, and internal processes.
- Integrated secure authentication, SSL/TLS controls, SSH access, firewall protections, and secure API communication for production web systems.
- Supported Git, Bitbucket, and GitLab CI/CD workflows, reducing deployment time by approximately 50% and improving release reliability.
- Worked in Agile/JIRA workflows, documented technical changes, debugged issues, validated releases, and supported business users after deployment.

NAU, Sodexo - Web Developer | Flagstaff, AZ |

Sep 2022 - Dec 2023

- Developed a secure enterprise web application using PHP, JavaScript, HTML, CSS, AJAX, and CGI Scripting to support daily business workflows.
- Managed MySQL and Microsoft SQL Server databases, including SQL queries, stored procedures, reporting logic, and performance-focused data retrieval.
- Improve page speed by reducing large images, unused scripts, and slow-loading website elements. Support website accessibility by using clear form labels, readable text, proper headings, and easy navigation.
- Built RESTful API integrations and XML/JSON data handling to connect web application features with internal systems and structured data sources.
- Developed dashboards and reporting views that helped business users review operational data more clearly and act on real-time information.
- Secured application traffic and access using SSL, SSH authentication, firewall rules, TCP/IP networking practices, and penetration-testing support.
- Supported Windows Server and UNIX/Linux environments and used Git, GitHub, and Jenkins to improve release consistency and deployment tracking. Provided issue analysis, technical documentation, and release support across application, database, server, and user-access workflows.

Wipro - Web Development Intern |

May 2021 - Jul 2022

- Developed and maintained an Integrated Library System using PHP, JavaScript, HTML, and CSS for catalog access and user-facing functionality.
- Updated front-end pages, forms, and application screens while supporting reliable UI behavior, clear user navigation, and consistent layout structure.
- Managed MySQL and Microsoft SQL Server data operations and optimized SQL queries to improve catalog search speed and data retrieval. Automated backups, system logs, and routine backend tasks using PERL, VB Scripting, and CGI Scripting.
- Supported software, network, and user authentication troubleshooting while documenting recurring issues, fixes, and repeatable support steps. Integrated third-party APIs for real-time book availability and catalog updates while supporting SSL/TLS, SSH, and firewall-based access security.
- Assisted with help desk support, testing, and application maintenance while learning production standards for secure web systems.

RESEARCH EXPERIENCE

Northern Arizona University - CI/CD Workflow Automation and Data Processing |

Aug 2022 - Dec 2022

- Researched GitHub Actions workflow automation and how CI/CD pipelines support repeatable web application builds, testing, and deployment.
- Collected and categorized repository workflow data to study automation patterns, data ingestion, processing jobs, and deployment use cases.
- Strengthened practical understanding of version-controlled automation, release workflows, and repository-based development practices used in production teams.

ADDITIONAL PROFESSIONAL STRENGTHS

- Business-minded approach to web development, with attention to usability, reliability, accuracy, maintainability, and clear communication.
- Comfortable translating technical issues into clear updates for non-technical stakeholders, business owners, and internal teams.
- Steady production-support mindset with experience handling web, server, database, network, authentication, and content-publishing issues.
- Professional style that balances technical quality, timely updates, practical business needs, and maintainable solutions.

WEB PRODUCTION SUPPORT CAPABILITIES

- Support content updates, responsive behavior, navigation fixes, form validation, page structure, and customer-facing website reliability.
- Coordinate technical updates with business needs, making sure website changes remain accurate, usable, secure, and easy to maintain.
- Use SQL reporting, dashboards, API integrations, and server troubleshooting to support complete web application functionality beyond the front end.
- Apply careful deployment habits with Git-based versioning, CI/CD awareness, rollback planning, release notes, and post-release validation.
- Maintain a practical marketing-support mindset by connecting website updates, digital content, social media needs, and business communication goals.

MARKETING AND DIGITAL WEB SUPPORT

- Support website updates that connect technical execution with business messaging, including service pages, promotions, customer-facing content, and landing-page changes.
- Coordinate basic social media support with website content so digital updates are consistent across online channels and easier for small businesses to manage.
- Organize content, images, page updates, form behavior, and calls to action with attention to usability, accuracy, and brand consistency. Assist non-technical stakeholders by explaining website issues, publishing steps, access problems, and completed fixes in straightforward language.
- Maintain a balanced approach to web quality by considering responsiveness, performance, accessibility basics, secure access, and business readability.

FULL-STACK TECHNICAL EXECUTION

- Combine front-end updates with back-end logic, SQL data access, REST API integrations, XML/JSON handling, and server-side troubleshooting when features require end-to-end support.
- Use database optimization, stored procedures, query review, reporting logic, and dashboard views to help business users access useful information quickly.
- Support secure environments through SSL/TLS, SSH, firewall rules, authentication controls, encryption practices, and careful production access handling.
- Apply Git, GitHub, Bitbucket, Jenkins, GitLab CI/CD, and release documentation practices to keep deployments controlled and easier to maintain.
- Document technical changes, recurring issues, troubleshooting steps, and release notes to improve long-term support and team visibility.

EDUCATION

Northern Arizona University - Master of Computer Science
Gudlavalluru Engineering College - Bachelor of Computer Science and Engineering

PROFESSIONAL VALUE & PROJECT HIGHLIGHTS

A focused overview of web delivery strengths, business support value, and project work relevant to agency, marketing, and business website environments.

Website Delivery

Responsive pages, landing-page updates, forms, portals, dashboards, and maintainable user-facing features.

Business & Marketing Support

Digital content updates, social media coordination, promotion-ready changes, and client-friendly communication.

Secure Technical Operations

SSL/TLS, SSH, access controls, API checks, server troubleshooting, Git-based releases, and production support.

SELECTED WEB PROJECT EXPERIENCE

Enterprise Web Portal and E-Commerce Support - Project Highlight | First Object Inc

- Built PHP and JavaScript-based web portal functionality for internal workflows, e-commerce support, SQL-backed data operations, and secure access.
- Improved system performance and release reliability through database optimization, backend automation, and GitLab CI/CD deployment workflows.
- Supported production updates with debugging, documentation, API communication checks, and secure access controls.

Operational Dashboards and Web Reporting - Project Highlight | NAU, Sodexo

- Developed dashboard and reporting functionality that helped business users view operational data more clearly and act on real-time information.
- Connected web application features with RESTful APIs and XML/JSON data handling to support structured integrations across internal systems.
- Built SQL-backed reporting views and front-end screens that made operational information easier to review and maintain.

Integrated Library System Support - Project Highlight | Wipro

- Maintained a user-facing PHP, JavaScript, HTML, and CSS library application with optimized catalog search and secure user authentication.
- Integrated third-party API functionality for real-time availability updates while supporting backups, logs, troubleshooting, and access security.
- Improved reliability through SQL query updates, routine automation, access troubleshooting, and clear support documentation.

Website and Digital Support Strengths

- Build and maintain responsive web pages, forms, portals, and user-facing features with clean structure, practical usability, and maintainable code.
- Support business and marketing needs through landing-page updates, website content changes, campaign-related pages, dashboards, and reporting views.
- Keep website content and small-business social media updates consistent by coordinating copy, images, page changes, posting needs, and business messaging.
- Translate business requests into clear technical tasks, confirm expected behavior, document fixes, and provide steady post-release support.

Web Development Focus Areas

- Responsive page updates, content sections, navigation behavior, form handling, dashboard views, internal portals, and SQL-backed reporting.
- API integrations, XML/JSON data exchange, third-party service connections, secure authentication, and business workflow automation.
- Git-based release control, CI/CD deployment support, server-side troubleshooting, database optimization, and secure production maintenance.
- SEO-ready implementation fundamentals through clean HTML structure, organized page content, responsive behavior, and performance-conscious updates.

PROFESSIONAL ATTRIBUTES

- Business-minded approach to web development, with attention to usability, reliability, accuracy, and maintainability.
- Comfortable translating technical issues into clear updates for non-technical stakeholders and internal teams.
- Steady production-support mindset with experience handling web, server, database, network, and authentication issues.
- Professional style that balances technical quality, timely updates, and practical business needs without overcomplicating solutions.

HOW I ADD VALUE TO A WEB AND MARKETING TEAM

Reliable Website Execution

Can handle content updates, responsive fixes, forms, portals, dashboards, and production support without losing sight of usability and business goals.

Marketing-Support Mindset

Understands that websites, landing pages, social content, calls to action, and customer-facing updates need to stay aligned with business messaging.

Technical Depth Behind the Website

Brings front-end, back-end, SQL, API, hosting, security, and deployment experience, which helps resolve issues beyond surface-level page edits.

Clear Stakeholder Communication

Able to explain technical problems, completed fixes, risks, and next steps in a way business owners and internal teams can understand.

Best-fit contributions: responsive web development | client-ready updates | dashboards and reporting | secure hosting support | API and SQL troubleshooting | social media and digital content coordination
